

Digital Business Ecosystem

Short Description: Development of a distributed cooperative intranet.

Application description

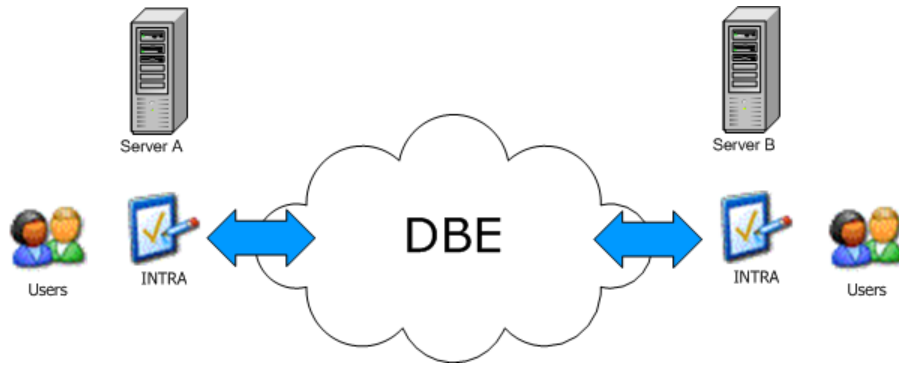

INTRA is a business application to improve the communication between the members of a corporation. The application has the next features which can be nicely integrated into de DBE system:

1. Calendar: With this tool, one person can take appointments, meetings and events. He can share his calendar with other users to coordinate them, giving access privileges to them.
2. Notes: In this section, user can take notes of events, tasks, or calls. The notes are classified in “pending” and “done”.
3. Dashboard: The dashboard allows the users to make public announcements, specifying start and end dates of the announcement.

INTRA project has made available all these shared features through DBE, getting a better distribution channel and a more cooperative environment.

Scenarios:

The INTRA project can be deployed in an environment where two organizations (departments, divisions, etc) want to have a physical separation between their tools, but they need to share some features, such as calendar or dashboard.

Users:

This application has a very wide range of potential user. This one principally developed to be used by small and medium companies belonging to the tourist sector. We have selected two users (real states) which are already customers of the application:

CAMARA OPTICOS:

Optical Services.

LINEA 20015, S.L.:

Printer Services

Feedback:

Our clients pointed out:

Improvement in the communication between their offices.

Added functionalities to the original warehouse application.

Future applications: direct access from customers or suppliers to the warehouse, through DBE.
