**PEARDROP Meeting
Bruxelles, 22 May 2007**

DBE Concept

- DBE concept is an architecture + an economic model + a shared enterprise
- Every stakeholder needs to contribute to the maintenance, governance, and sustainability of the infrastructure
- The strength of a shared medium of communication and business interaction is the catalysis of democratic processes for its sustainability.
- Accountability, transparency and trust are *necessary* to achieve the DBE vision

DBE in 2003 and Now

An Interesting Theoretical Result of DBE Research

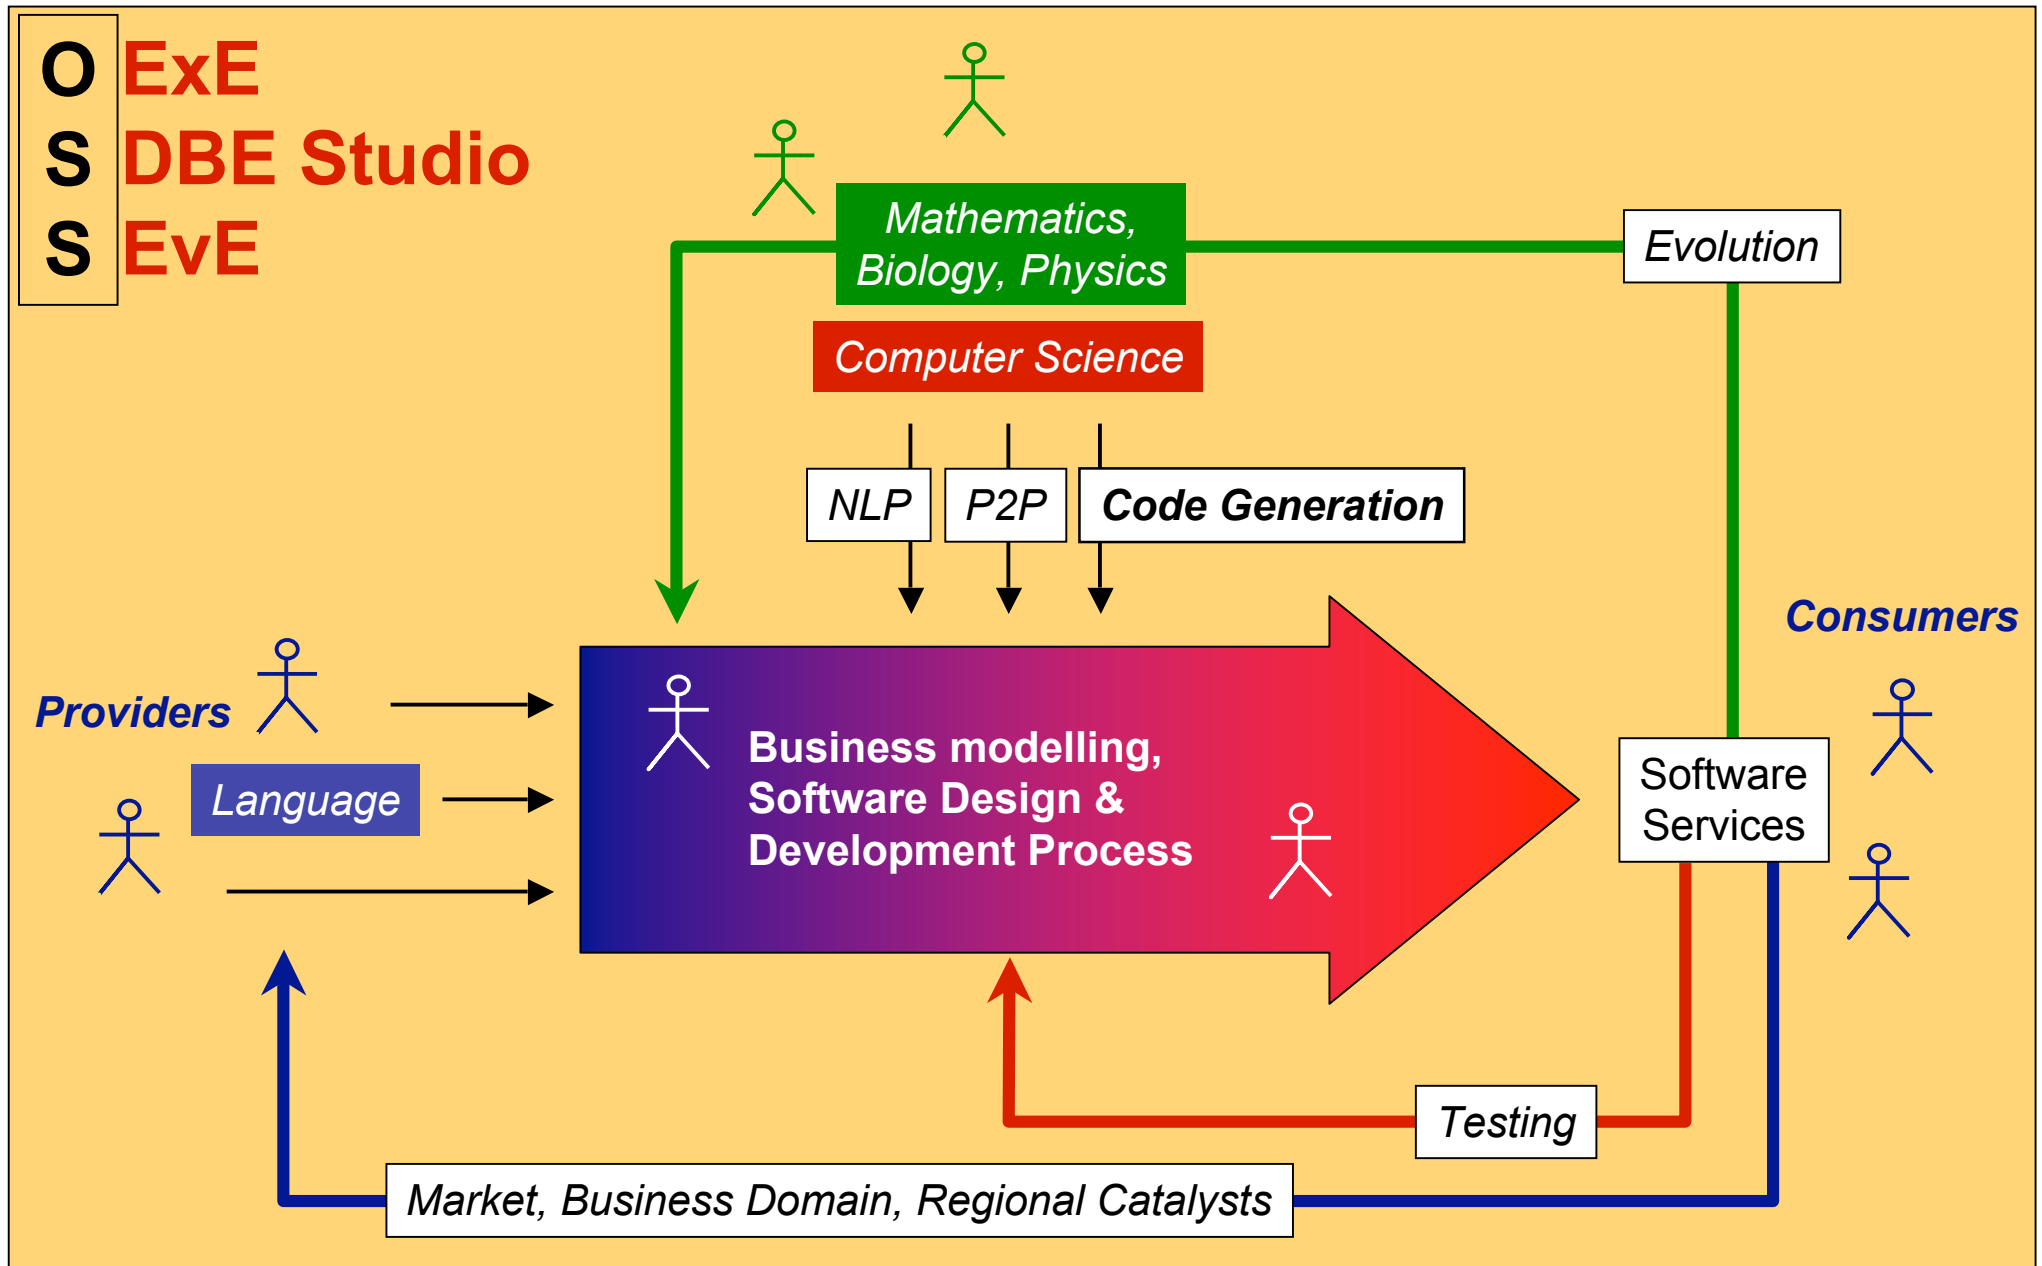

The lack of theory that is often lamented in software engineering is actually not a lack at all:

There is plenty of theory underpinning software engineering, it just does not happen to be all Mathematics and Logic

A good part of the theory comes from Social Science and Language

→ *Software Engineering is a social process!*

Digital Business Ecosystem Methodology

Contextual Feedbacks of Digital Ecosystems Methodology
